

# **Test Verification of Conformity**

## Verification Number: EE-18021715

On the basis of the referenced test report(s), sample(s) tested of the below product have been found to comply with the standards harmonized with the directives listed on this verification at the time the tests were carried out. Other standards and Directives may be relevant to the product. This verification is part of the full test report(s) and should be read in conjunction with it <them>.

Once compliance with all product relevant  $e_{mark}$  mark directives are verified, including any relevant e.g. risk assessment and production control, the manufacturer may indicate compliance by signing a Declaration of Conformity themselves and applying the mark to products identical to the tested sample(s).

Applicant Name & Address:	Toshiba Carrier (Thailand) Co., Ltd.
	144/9 Moo5 Bangkadi Industrial Park, Tivanon Rd.
	T. Bangkadi, A. Muang, Pathumthani 12000 THAILAND
Product Description:	Air conditioner
Ratings & Principle	220-240Va.c., 50Hz
Characteristics:	
Models/Type References:	See page 2/2
Brand Name(s):	Toshiba
Standard(s)/Directive(s):	EN 55014-1: 2006/AMD1: 2009/AMD2: 2011
	EN 55014-2: 2015
	EN 61000-3-2: 2014
	EN 61000-3-3: 2013
	Part of requirements as specified in 2014/30/EU, EMC Directives
Verification Issuing Office	Intertek Testing Services (Thailand) Ltd.
Name & Address:	1285/5 Prachachuen Road, Wong-Sawang Sub-District,
	Bangsue District, Bangkok 10800
Test Report Number(s):	EE-18021715

This Verification is for the exclusive use of Intertek's client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this Verification. Only the Client is authorized to permit copying or distribution of this Verification. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test/inspection results referenced in this Verification are relevant only to the sample tested/inspected. This Verification by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

## **APPENDIX:** Test Verification of Conformity

This is an Appendix to Test Verification of Conformity Number: EE-18021715.

## **EMC TEST REPORT**

Report No.	:	EE-18021715	
Issue Date	:	18 April 2018	
Client's Reference Number	:	00856609	
Product Description	:	Air conditioner	
Model/Type	:	Indoor unit / Outdoor unit RAS-16PKVPG-E / RAS-16PAVPG-E	
Manufacturer	:	Toshiba Carrier (Thailand) Co., Ltd.	
Address	:	144/9 Moo5 Bangkadi Industrial Park, Tivanon Rd. T. Bangkadi, A. Muang, Pathumthani 12000 THAILAND	
Test Conclusion	:		Non-comply

## **SUMMARY**

The equipment comply with the requirements according to the following standards: EN 55014-1: 2006/AMD1: 2009/AMD2: 2011 CISPR 14-1: 2005/AMD1: 2008/ AMD2: 2011 AS/NZS CISPR 14-1: 2013 CISPR 14-1: 2011 EN 55014-2: 2015 CISPR 14-2: 2015 EN 61000-3-2: 2014 EN 61000-3-3: 2013

#### **1. GENERAL INFORMATION**

#### 1.1 Description of Equipment Under Test (EUT)

EUT : Air conditioner Description of EUT:

RAS-16PKVPG-E / RAS-16PAVPG-E is set of 1 Phase Air conditioner, Wall -mount type air conditioners, Heat-pump unit.

Critical component in EUT:

- Compressor model: KTN150D42UFZ.
- Outdoor unit main PCB model: WP-030.
- Indoor unit PCB model: MCC-5088.

RAS-16PKVPG-E / RAS-16PAVPG-E has been selected as a representative model for test is due to the biggest capacity while components in terms of electrical, electronic and wiring are same.

The EMC compliance of EUT can be found in this report. Model covered have been shown in shown in appendix III.

EUT Model/Type number	:	Indoor unit / Outdoor unit RAS-16PKVPG-E / RAS-16PAVPG-E
EUT Serial number	:	-
Rating	:	220-240Va.c., 50Hz, 10.45A
Main Lead	:	Fixed Appliance.
Clock Frequency	:	10.00 MHz for both set.
Data line	:	N/A
Control line	:	N/A

Report No.EE-18021715Page 5 of 54Issue Date18 April 2018

## **1.2 Description of Customer**

Applicant	:	Toshiba Carrier (Thailand) Co.,Ltd.
Address	:	144/9 Moo5 Bangkadi Industrial Park, Tivanon Rd.
		T. Bangkadi, A. Muang, Pathumthani 12000 THAILAND
Manufacturer	:	same as applicant
Address	:	same as applicant

## 1.3 Description of Test Handling

Sample received date	:	20 February 2018
Test date	:	21 February - 28 March 2018
Test Facility	:	Intertek Testing Services (Thailand) Ltd.
		Electrical and Electronics Product Test Center (PTEC)
Tester	:	Namo Laoprasert
Remark	:	Following tests subcontract to ILAC accredited laboratory:
		Harmonic Current Emission
		Voltage Fluctuation and Flicker Test
		ESD Immunity Test
		EFT/Burst Immunity Test
		Surge Immunity Test
		Conducted Immunity Test
		Voltage Dips Test

Report No.EE-18021715Page 6 of 54Issue Date18 April 2018

## 2. TEST SPECIFICATIONS

## 2.1 Mode of operation during the test / Test peripherals used

Within this test report, EUT has been measured with the temperature controller setting at the lowest position when in cooling mode, and at the highest position when in heating mode (if any).

The ambient temperature is defined at the temperature of the air flow to the indoor unit. The ambient temperature for testing is  $15 \pm 5$  °C when the EUT is operating in heating mode and  $30 \pm 5$  °C when it is operating in cooling mode. If it is impractical to keep the ambient temperature within this range, another temperature is also permissible, provided that the equipment operates in a stable manner (shall lie within 15-35°C).

The operating condition shall maximize emission of the unit i.e.

- Determined by select the test voltage by check at 160 kHz and 50 MHz over 0.9 to 1.1 times of rated voltage defined (or at the upper and lower rate defined respectively) to check the voltage that cause maximum disturbance level. That's the test voltage selected.
- If EUT is 50/60Hz, check to find 1 represent frequency test as same as above i.e. at 160kHz and 50MHz.
- The mode which gave the worst condition from conducted emission after determined will be selected as a representative mode to do full test for the result in this report.

Refer to above, selected Test Supply: 264V, 50Hz.

No test peripherals used.

	Report No.	EE-18021715

## 2.4 Uncertainty Application

Uncertainty of Measurement applied according to CISPR 16-4-2. Reference  $U_{cispr}$  in the table as followed used as a reference value for the judgment.

Test Method	Ucispr	U <sub>Lab</sub>
	(dB)	(dB)
Conducted disturbance at mains port using AMN	3.4	4.25
(150kHz to 30kHz)		
Disturbance power (30MHz-300MHz)	4.5	3.46
Radiated disturbance (30MHz to 1000MHz)	6.3	S <sup>1</sup>

Compliance or non-compliance with a disturbance limit shall be determined in the following manner:

- a) If  $U_{lab}$  is less than or equal to  $U_{cispr}$  in Table, then the test report may either state the value of  $U_{lab}$  or state that  $U_{lab}$  is less than  $U_{cispr}$ .
  - Compliance is deemed to occur if no measured disturbance level exceeds the disturbance limit;
  - Non-compliance is deemed to occur if any measured disturbance level exceeds the disturbance limit.
- b) If U<sub>lab</sub> exceeds U<sub>cispr</sub> of Table, then the test report shall contain the value of U<sub>lab</sub> (in dB) for the measurement instrumentation actually used for the measurements.
  - Compliance is deemed to occur if no measured disturbance level, increased by  $(U_{lab} U_{cispr})$ , exceeds the disturbance limit;
  - Non-compliance is deemed to occur if any measured disturbance level, increased by (U<sub>lab</sub> – U<sub>cispr</sub>), exceeds the disturbance limit.

<sup>&</sup>lt;sup>1</sup> Refer to subcontractor uncertainty of measurement, if applicable.

## 3. Mains/Load/Control Terminal Continuous Disturbance Voltage

Test conclusion:	🛛 Pass	🗌 Fail
Operating Condition	EUT is warmed up at lea	ast 15 minutes before measurement.
	Lowest temperature set	ting, maximum fan speed.

#### 3.1 Test Method

- □ Test equipment as shown in the table in topic 2.2 is connected as shown in figure 1 topic 3.1.1 to measurement terminal continuous disturbance voltage.
- □ EUT is configured by follow the particular requirement in the reference standards, if available. If the particular requirements are not specified, EUT shall be configured with appropriate load to maximize the disturbance signal.
- □ Mains terminal disturbance is measure at line to earth and neutral to earth.
- Pre-scan shall be done over the whole range of frequency as specified by the standard.
- ❑ At least 6 worst peaks which are closet to the limit(s) shall be selected to do the Final scan.
- Final scan shall be done by reduce the span zooming in to the selected peak and fine tune to the exact frequency which give the highest disturbance value. Re-measure at that frequency with peak detector and other detector according to the limit(s) applied.

## 4. Continuous Disturbance Power

Test conclusion: Pass Fail

Operating Condition EUT is warmed up at least 15 minutes before measurement. Lowest temperature setting, maximum fan speed.

## 4.1 Test Method

- □ Test equipment as shown in the table in topic 2.2 is connected as shown in figure 2 topic 4.1.1 to measurement continuous disturbance power.
- □ EUT is configured by follow the particular requirement in the reference standards, if available. If the particular requirements are not specified, EUT shall be configured with appropriate load to maximize the disturbance signal.
- □ Continuous disturbance power is measure over the 6 m length cable by prescan 2m a time. The pre-scan is done at ~0m (the closet to EUT), 3m and 5m.
- Pre-scan shall be done over the whole range of frequency as specified by the standard. One worst trace will be selected to report as a pre-scan trace.
- At least 6 worst peaks which are closet to the limit(s) shall be selected to do the Final scan. The selection will do base on the 3 scanning result as mention above. Different frequency will be selected.
- Final scan shall be done by reduce the span zooming in to the selected peak and fine tune to the exact frequency which give the highest disturbance value. Re-measure at that frequency with peak detector and other detector according to the limit(s) applied.

## 5. Main Terminal Discontinuous Disturbance Voltage

Operating Condition EUT is warmed up at least 15 minutes before measurement. Lowest temperature setting, maximum fan speed.

#### 5.1 Test Method

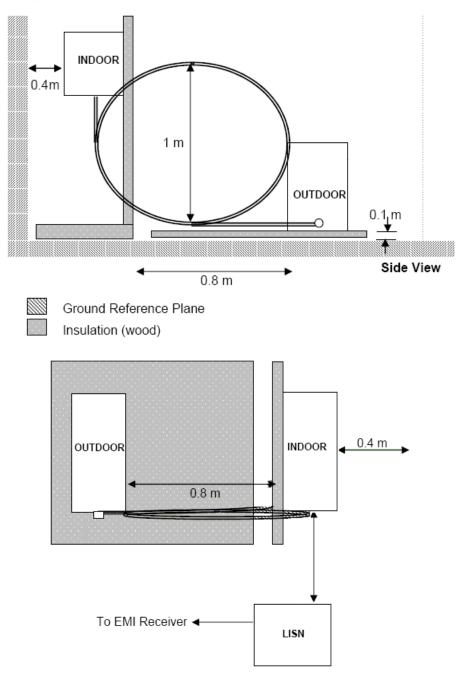

- □ Test equipment as shown in the table in topic 2.2 is connected as shown in figure 3 topic 5.1.1 to measurement discontinuous disturbance at main terminal.
- □ EUT is configured by follow the particular requirement in the reference standards, if available. If the particular requirements are not specified, EUT shall be configured with appropriate load to maximize the disturbance signal.
- □ The observation time is based on the EUT (ensure that cycle of operation shall be fully complete) or 120 minutes.
- Main terminal discontinuous disturbance (click) is measured by discontinuous disturbance analyzer (DIA) with the limit specified in 5.1.2 for the defined observation time.
- □ Test and conclusion of test result shall be referred to the flow chart in CISPR 14-1.

EE-18021715 18 April 2018

 EE-18021715

 Page 20 of 54
 Issue Date
 18 April 2018

## 5.1.2 Limit

The limits for discontinuous disturbance depend on the average number of clicks per minute, Click rate *N*. There are two methods for determining the click rate:

 $\boxtimes$  by measuring the number of clicks or

by counting the number of switching operations.

Run A limit refer to Main terminal disturbance voltage limit of CISPR14-1 as "L" as shown in table 3

Table 3-Allowable limits for discontinuous noise terminal voltage

F	requency range	0.15	0.5	1.4	30

## Immunity Test

EN 55014-2: 2015 CISPR 14-2: 2015

## Appliance Classification: Category II

#### Appliance shall fulfill the following immunity requirements

Test Description	Performance criteria required
Electrostatic discharge	В
Fast transient	В
Surge	В
Injected current up to 230MHz	А
Voltage dips	С

#### Performance criteria of test specification

Function	Criteria	During Test	After Test
Data storage	A	No loss or change of storage	No loss or change of storage
		data	data
	В	loss or change of storage data	No loss or change of storage
		can automatic recovered without operator resetting	data
	С	loss or change of storage data can recovered by operator resetting	No loss or change of storage data
Display	A	The display can show latest status	The display can show latest status
	В	The display cannot show latest status but can automatic recovered without operator resetting	The display can show latest status
	С	The display cannot show latest status recovered can be obtained by operator resetting	The display can show latest status

## **Test Verdict**

**Criterion A**: Normal Performance within limits specified by the manufacturer, requestor or purchaser.

**Criterion B**: Continue to operate as intended after the test. No degradation of performance or loss of function. During the test degradation of performance is allowed, however no change of actual operating state or stored date.

**Criterion C**: Temporary loss of function is allowed, provided the function is self-recoverable or can be restored by the operation of the controls.

	Report No.	EE-18021715
Page 29 of 54	Issue Date	18 April 2018

## 8. Electrostatic Discharge

Test conclusion:	🛛 Pass	🗌 Fail
Monitoring Condition	EUT and its display unit operation.	shall function appropriately as normal
Test Requirement:	В	

## 8.1 Test set-up drawing
